

Paving the Way to Terabit Wireless Telecommunications

We provide advanced solutions that will allow the demand for ubiquitous connectivity to decrease.

Who We Are

Electromagnetic Technologies Industries, Inc. (ET Industries) is an engineering firm specializing in the design and manufacture of state-of-the-art RF components, subsystems and systems. With the broadest frequency range in the industry (10 MHz to 67 GHz) coupled with low VSWR, high directivity and moderate insertion loss, ET Industries' products are among the best in the industry and ET Industries is considered one of the leading engineering firms in its field.

Why Choose Us

Deep Industry Experience

We have come up with innovative ways to minimize the disadvantages of the methods currently used in the market to increase data throughput speeds.

Continuously Improving

We are non-stop working to better our products and always coming up with new innovative ideas.

Lower cost than competitors

We are committed to making sure every party in our transaction is winning from businesses to the people in the areas with our telecommunication system.

What Our Multi-Beam Antenna System Can Do For You

Multiply Your Customers

Multiply The Existing Spectrum

Multiply Your Speeds

Increase Quality S/N Ratio

Multiply Your Revenue
